DETAILED ACTION

Response to Amendment

1. This office action is in response to amendment filed on 6/20/05.
2. Claims 1 – 4 are presented for examination.

Allowable Subject Matter

3. Claims 1 – 4 are allowed.
4. The following is an examiner's statement of reasons for allowance: the record of prior art does not show a linear motor having a rod-like member comprising a cylindrical body with a substantially oval or substantially rectangular cross section, and a plurality of plate-like segment magnets with a substantially oval or substantially rectangular plate shape which are accommodated in the cylindrically body and stacked in a longitudinal axial direction of the cylindrical body. Makota's reference (JP 08-275,495) teaches the plate-like segment magnets with rectangular plate shape cross section but fails to teach the cylindrical body, while AAPA teaches the cylindrical body with a circle cross section. Aoyama's reference (U.S. Patent No. 5,808,381) teaches the cylindrical body (3) with a rectangular cross section but the cylindrical body made by ferromagnetic material and the moving coil (2) is inside the magnets (1).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
